

Schlage SR™ Keying System

ALLEGION™

PIONEERING SAFETY™

Schlage SR™  
Keying System

# What is a keying system?

A keying system allows you to control access to all of the locked openings in your facility from the front door to high security server rooms. It is the result of the choices you make for the cylinders on your locks as well as ease of key duplication you prefer for your facility. For instance, if high security is your top priority you should consider a system where key design is patent protected and duplication is tightly controlled. Other facilities may prefer convenient and easily accessible key duplication.

## Identify the openings in your building

Before you begin to configure your system, identify all of the access points in your facility. Start at the exterior and move through the building's core. Consider grouping access points into categories, such as by building, department or floor. This will allow you to consider the security level and key control for each area of the building.

# Different keying systems

Most Schlage and Legge locks are supplied individually keyed. A well designed keying system facilitates more control and increased security. Specially keyed systems have been developed to enable end users to assign access to individuals for locks that they are authorised to operate. Lost ball construction keying is available.

### Keyed to differ

All keys are individual and stand alone. Each lock can only be opened by its own individual key.

### Keyed alike

Allows for a number of locks to be operated by the same key as they are keyed to a specific code. This system is particularly suitable for residential applications with front and back doors.

### Master keyed

This system allows locks in a group to be keyed individually and does not allow those individual keys to operate any other lock in the system. However all locks in the system can be operated by one Master Key.

### Grand master Key

With this system locks in several groups are independently keyed with a Master Key for each group. Each group is independent of each other, and the Grand Master Key will work with all locks in all groups.

### Maison keying

A maison key system is a keying system that allows a lock to be opened with a number of unique individual keys. Typically found in applications like apartment buildings, it provides unrestricted access to common doors. Unlike Master Keyed systems, the lack of security makes this a less attractive option.

# Cylinders

The Schlage SR™ Keying System has been designed using market leading technical specifications, with space and depth to suit most Australasian barrel and cylinder profiles. The system also has a wide range of cylinder options, making it easier to integrate it with existing systems or new projects. All Schlage SR™ Keying System cylinder bodies are made of extruded brass construction for quality and durability.

Oval cylinder

PD cylinder

Rim cylinder

Mortice cylinder

Euro cylinder

# Schlage SR™ Keying System

The Schlage SR™ Keying System offer end users and building owners a locksmith grade, high precision restricted keying system with key patent protection. Designed for the Australasian market, Allegion offers a Master Key design service for the Schlage SR™ Keying System and can be combined with our door hardware scheduling service to provide a premium safety solution for your building and assets.

## Local compatibility

Made specifically for the Australasian market and available to suit the most common Australasian type barrel profiles.

## Proven strength

High quality nickel silver keys provide superior key strength and reliability the Schlage brand is renowned for.

## Patent protection for more than 20 years

Thanks to a new restricted design and supply that provides patent protection for Schlage SR™ keys for the next two decades.

## Increased combination range

Keys can be cut to depths of 0 to 10, increasing the range of combinations that can be configured.

## Key colour coding

18 different colour options available. Contact us for full colour range.

### Why use the Schlage SR™ Keying System?

Schlage SR™ keys are identifiable as SR1, SR2, SR3 and 18 different coloured identification studs can be attached to the bow of the key. The Schlage SR™ system is:

- Drill resistant
- Pick and bump resistant
- Nationwide network of experts in Australia – Brisbane, Melbourne, Perth and Sydney
- Nationwide network of experts in New Zealand – Auckland, Christchurch and Wellington
- In-house keying experts
- Housing standard shape and size
- Developed in Australia by Schlage (a trusted global brand for over 95 years)
- 6 pin cylinder for added protection

### Schlage has re-designed high security keying systems

In schools, apartments, hospitals and universities, a flexible and secure keying system is the foundation of a multi-level security management system. The Schlage SR™ Keying System delivers a higher level of security because it cannot be duplicated without authorisation. Its distinctive design provides the user with total key control.

### Restricted keyways

The Schlage SR™ Keying System system allows us to design, build and supply a restricted keying system to suit individual requirements, either from Allegion's door scheduling service or from information supplied by the client or the end user. The Schlage SR™ Keying System is developed using the latest master keying software to ensure system integrity and security. Keys can only be obtained/copied from the authorised resellers, with authorisation from the building's owner or nominee.
